DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of the invention of Group I (clms. 1-3) in the reply filed on August 17, 2004 is acknowledged.

Claims 4 and 5 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on August 17, 2004.

The restriction requirement is made FINAL.

Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on July 3, 2001 and August 31, 2001. It is noted, however, that applicant has not filed a certified copy of the Japanese priority papers (i.e., application) as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by McEwen et al. (3,980,014). McEwen discloses a grinding sludge compacting machine to compress and make a briquette (fig. 1) of a grinding sludge by inserting a concentrated grinding sludge formed by filtering a grinding sludge, produced in a grinding line by grinding hardened component parts while containing a coolant, into a press unit comprising a cylindrical mold (28) fixed on a machine bench (12) a first piston (40) reciprocating movably inserted in the cylindrical mold and a second piston (50) arranged in a face-to-face relation with the first piston, and compressing the concentrated sludge; a diameter of an end of the second piston being larger than an inner diameter of the cylindrical mold (fig. 1). Examiner notes that it is inherent that the piston (50) has a diameter larger than the cylindrical mold so to be able to contain the briquette until the piston (50) is retracted for discharge of a formed briquette (col. 4, lines 29-43).

Allowable Subject Matter

Claims 2 and 3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
